

SwiftMart Nepal — Website Build Prompt

Copy everything below this line into your AI builder, and attach the logo file (swiftmartlogonew.jpeg) with it.

THE PROMPT

Build me a complete multi-page e-commerce website plus an admin panel for **SwiftMart Nepal** — an online store based in Kathmandu selling unique, genuinely useful everyday products that are hard to find locally in Nepal: things like induction cooktops, electric kettles, laptop stands, rechargeable desk lamps, humidifiers and similar. All prices are in Nepali Rupees (Rs).

Brand & contact — use these everywhere on the site:

- Store name: **SwiftMart Nepal** · Domain: **swiftmartnepal.com**
- Email: **contact@swiftmartnepal.com**
- Phone: **+977 976-9753746** · WhatsApp: same number (link: wa.me/9779769753746) — WhatsApp buttons and “ask us” links should appear throughout the site
- Facebook page: <https://www.facebook.com/profile.php?id=61592544157695>
- Logo: attached file **swiftmartlogonew.jpeg** (a box with speed lines and the “SwiftMart Nepal” wordmark). You may recolor the logo to match the website’s theme.

Where to take inspiration from:

- <https://commerce.pathao.com/> — learn from its font and styling (do NOT copy its color palette)
- <https://www.amazon.com/> — take the options and features a serious store has (search, ratings and review counts, deal sections, related products, order tracking, etc.), not its look
- <https://hamrobazaar.com/> — take the options and how things work for the Nepali market (trending sections, saved items, safety/FAQ pages), not its styles

Storefront — pages and features:

- Home, shop-all page (category filters, sorting, working search), product detail pages (honest specs, stock status, quantity selector, add to cart, buy now, WhatsApp “ask about this product” link), cart, checkout, order tracking, about + FAQ page
- Checkout with no account needed: name, phone, delivery zone (inside Kathmandu valley vs outside — different delivery fees and free-delivery thresholds), city, full address, optional note
- Payments: **Cash on Delivery** as the default, plus **eSewa** and **Khalti** — for wallet payments show the ID **976-9753746 (SwiftMart Nepal)** and collect the customer’s transaction code
- Order confirmation with a unique order ID, plus a button to send that ID on WhatsApp; tracking page shows a status timeline: Placed -> Confirmed -> Dispatched -> Delivered (and Cancelled)
- Save-for-later hearts on products, an announcement bar, and realistic customer reviews with Nepali names and cities

Nepal-market must-haves:

- COD made prominent (most Nepali online orders are COD) · eSewa / Khalti / FonePay badges · WhatsApp-first support · honest delivery timelines (valley 1–2 days, outside the valley 3–5 days) · free delivery over a threshold (e.g. Rs 2,000 inside the valley)

Admin panel (single page, PIN-protected) — model it on my existing Sio Dhago admin (siodhago.vercel.app/admin.html):

- **Dashboard:** stat cards and recent orders
- **Orders:** filter by status, search, expandable order details, update status, delete, CSV export
- **Products:** add / edit / delete — name, category, price, old price, stock, badge, image, description, specs; changes show on the store
- **Finances (replicate my Sio Dhago finances tab):** period filters Today / last 7 days / last 30 days / This month / custom last-N-days; Sales, Costs, Profit and Orders cards; a day-by-day table; an “add a cost” form with categories (Employee/wages, Delivery, Inventory/stock, Marketing, Packaging, Rent, Other); a costs list; and a “Download PDF Report” button
- **Settings:** announcement text, contact details, delivery fees, homepage image URLs, change PIN

Content and asset rules:

- Authentic, clean copy written like a real Nepali small business — absolutely no generic AI-slop marketing text
- No emojis anywhere — use custom-drawn SVG icons instead

Images — generate AI images that give the site a cozy, homely feel that carries our energy:

- One wide hero image (16:9): a cozy Nepali home kitchen in soft golden morning light — a steel electric kettle gently steaming, cups of milk tea, and misty Kathmandu rooftops visible through a window
- Three category scenes: a warm kitchen counter; a desk/study corner with a lamp and laptop on a stand; a home-comfort corner with a humidifier, plant and blanket
- No people and no text or watermarks in any generated image

Tech:

- Static multi-page site I can deploy on Vercel; the storefront and the admin panel must share the same product and order data
